Maralee Csellar, AU Media Relations 202-885-5952

WASHINGTON, D.C. (Nov. 2, 2006)—Based on final and official registration* reports from 34 states, an estimated 68 percent of eligible citizens or 138,810,000 will be registered for the Nov. 7 election, according to a report on registration and final statewide primary turnout released today by American University's Center for the Study of the American Electorate.

The 68 percent of eligibles registered is comparable to a similar figure for 2002.

Based on the 13 states which have reported partisan registration figures (out of 28 and the District of Columbia which have partisan registration) and for which there are comparable figures in previous years:

- Democratic registration was essentially flat at 36.8 percent of eligibles as compared to 37.2 percent which were registered in 2002. But the registration percentage is fully 24 percent lower than the 48.3 percent who registered in 1962.
- Republican registration was also virtually unchanged at 31 percent as compared to 30.2 in 2002. Republican registration has actually increased in the last four decades from the mid-twenties to more than 30 percent of eligibles, but almost all of that increase is due to the Voting Rights Act and the rise of two-party competition in the South. Republican registration in the South, based on the states reporting, has increased 150 percent from 12.1 percent in 1962 to 28.4 percent in 2006. But outside of the South Republican registration in these states is actually slightly lower (30.9 percent in 1962 to 28.6 percent in 2006).
- Registration for those not affiliated with either major party (other parties and independents) rose substantially from 14.4 percent of eligibles in 2002 to 16.7 percent in 2006. Those who are registering but eschewing the major parties has increased from 1.4 percent in 1962 to the 16.7 level now and each election brings new increases.

Despite flat registration, turnout is virtually certain to increase in next Tuesday's election, according to Curtis Gans, the Center's director. Turnout in 2002 was 39.7 percent of eligibles. According to Gans, turnout is likely to exceed the most recent high of 42.1 percent in 1982 but probably fall short of the previous benchmark of 47 percent in 1970. If the political backdrop of the election doesn't radically change between now and next Tuesday, it is also likely that the Democratic mid-term vote will exceed the Republican vote for the first time since 1990, Gans predicts. Prior to 1994, the Democrats had the larger share of the vote in every mid-term since 1946.

(more)

Final and official returns from all states for the 2006 statewide primaries confirmed the findings of the Center's earlier report:

- Turnout in the 39 states which held statewide primaries in both parties was a record low at 15.8 percent of eligibles, down from 18.6 percent of eligibles in 2002 and more than 50 percent lower than the turnout in the highest recent primary – 1966 at 33.3.
- Statewide turnout in the 44 Democratic primaries reached a record low of 8.6 percent as compared to 9.8 in 2002. Average Democratic mid-term statewide primary turnout is now 56 percent lower than the 19.7 percent average who voted in 1962.
- In the 41 statewide Republican primaries turnout declined from 8.4 percent in 2002 to a record low of 7.1 percent.

Summary figures on all these findings are in the notes and summary section of this report and more complete charts are available on the following websites:

<http://www.american.edu/ccps/csae> or <http://www.american.edu/media/electionexperts>

** Please read note 3 on the deficiencies in "official" registration figures and the adjustments the Center makes to produce defensible conclusions.*

COMMENTARY

The following comments are attributable to Curtis Gans, director, American University Center for the Study of the American Electorate:

A tale of two polities: What we are witnessing in 2006 in the United States and evidenced in this report are two polities. The first, energized by anger and fear driven by the polarization created by the Bush Administration, will, as in 2004, vote in large numbers out of deep emotion. The second is the polity that pushes primary turnout to record lows and registers in record numbers for neither major political party. The first polity will come out in large numbers because they see something important to decide and despite their lack of belief in either major party, they will make a choice of national direction.

The second polity is the one which represents the underlying verities of American political life:

–a polity which no longer possesses the religion of civic duty which has withdrawn from political participation save for those times that there is a deeply emotional subtext to an election.

–a polity which eschews the major parties for good reasons – because one is far to the right of the American center and the other has not had a durable and relevant message and program since the late 1960s; because one party has sustained grassroots organization for only a portion of its real constituency and the other has had no sustaining grassroots organization (although Howard Dean, to his credit, is attempting to build one).

–a polity that has increasing disdain for the polarization, lack of comity and policy deadlock that has characterized American politics for some time.

–a polity which is increasingly mistrustful of its leaders many of whom have earned that mistrust. (Think, perhaps, of Presidential statements such as: "I am not going to send American boys to do what Asian boys are supposed to do," "I am not a crook," "I did not know anything about Iran-Contra," "Read my lips: No new taxes," "I did not have sexual relations with that woman," or, to paraphrase, "we are in imminent danger of weapons of mass destruction.")

(more)

—a polity increasingly disgusted by the execrable conduct of our political campaigns which denigrates any semblance of reasoned dialogue, undermines respect for all political leaders and creates a miasma over the entire political process. Citizens may in elections which have a backdrop as this one does of deep emotional feelings, hold their nose and vote in higher numbers. But in elections without such a back drop, they increasingly eschew the polls.

—a polity not trained in their homes, schools or communities to assume the responsibilities of citizenship.

—a polity whose visual media fail to cover politics adequately and, when they do, tend to cover it with a cynical veneer that often undermines citizen connection with the stakes in elections and public policy.

The first polity will come out in elections of anger – in 1966 against Lyndon Johnson and, underlying that negativity, the war in Vietnam; in 1974, against the legacy of the Nixon Administration; in 1982 because of a temporary but severe recession; in 1994 because of the foibles of the first two years of the Clinton Administration and in 2004 and this year because of President Bush and his policies.

But it is the second polity which truly reflects the underlying condition of American politics. We will ignore that polity and its underlying causes at our peril. Because not only does American democracy depend on the expressed will and willingness to engage of our citizenry, but also because we may, someday, have an election of import as this one is, and the citizenry will not rise to the occasion.

For nearly 30-years the Committee for the Study of the American Electorate has been a principal source for non-partisan information, data, analysis, and public education with respect to citizen involvement in the political process. In fall 2005, the committee joined American University's Center for Congressional and Presidential Studies as a Center within the university's School of Public Affairs. The school, which is the home to research centers and institutes in the fields of political science, public administration, public policy, and justice, offers a public affairs education at the undergraduate, graduate, and executive levels.

To interview Curtis Gans contact him directly at 202-885-6295 (o) or 703-304-1283 (c). If you can not reach Gans, please feel free to contact Maralee Csellar in AU's Media Relations Office at 202-885-5952 for assistance.

I. NOTES AND SUMMARY CHARTS

NOTES AND SUMMARY CHARTS

1. What is Turnout: Turnout should be a simple calculation in which the numerator is the number of votes cast and the denominator is the number of citizens eligible to vote. But because of various anomalies in election statistics, some of which are outlined in detail below, this calculation is more complicated. By common usage, the numerator in every Presidential election year is the vote for President (even though that tally is usually about one percentage point lower than the actual number of citizens who go to the polls. It is lower because many states, although an ever-diminishing number, do not keep records of all those who go to the polls, the total ballots cast). In mid-term elections, the numerator is the total of votes for the statewide race in each state which draws the highest number of votes and the aggregate total of votes for U.S. House of Representatives in those states which do not have statewide races. This year there are three states – Kentucky, Louisiana and North Carolina – which do not have statewide races and for which the aggregate total of votes cast for House of Representatives will be used. (This total tends to be between 1 and 1.5 percentage points lower than the actual total ballots cast but is used for the same reasons – that many states do not compile total ballots cast figures. The Center does, when available after the election provide a comparison of total ballots cast and vote for highest office.)

Turnout is **NOT** the percentage of those registered who voted. There are three basic reasons for this: a. Using registration as a denominator does not account for the whole of the electorate, including those who are not registered. Thus, it gives a false picture of true citizen engagement. b. Changes in registration law can dramatically affect the figures. If the nation adopts, as it did, a registration law that provides for national mail registration, registration at motor vehicle bureaus and at social service agencies, registration will go up but turnout of those registered will decline artificially by a greater amount than it does when using the entire eligible electorate as a denominator. c. Registration figures are subject to the fluctuations of election administration. If a state conducts a thorough purge of its registration lists close to election, its registration figures will be lower and thus its percentage of registered voting will be higher. But if registration lists are not so purged, as they are not in many states, the figures for registration will be higher and the turnout based on these inflated registration figures will be lower. Consider how distorted a turnout percentage using registration as a base would be in a state such as Alaska, which because of lack of regular list cleaning and potential flaws with the Census Bureau's estimates of the state's eligible population, registration figures are regularly in excess of 100 percent of the eligible vote.

All comparisons in CSAE reports are made in comparison with the previous similar elections – that is Presidential elections are compared with previous Presidential elections and mid-terms with mid-terms. Turnout tends to be between 10 -20 percentage points lower in mid-term elections than in Presidential elections.

2. The Eligible Vote – The Denominator for Determining Turnout: The eligible vote in this report is the number of people residing in the United States who are 18 years of age or over minus the number of non-citizens residing in the United States who are 18 years of age and over

as of April 1. It is an interpolated figure from the 2000 Census, based on the methodology outlined below.

For years, CSAE and every other reputable organization working in this field had used the Census Bureau's estimates of November age-eligible population (VAP) to determine turnout. That figure came under legitimate criticism because it included non-citizens; convicted felons (in most states) and, in some states, ex-felons; and people deemed mentally incompetent in institutions who could not vote and did not include citizens residing in other countries, citizens naturalized during the election year and the citizen portion of the Census' undercount, all of whom could vote but were not part of the VAP estimate. The Census Bureau has ceased providing its VAP estimates.

For years also, Dr. Walter Dean Burnham, professor emeritus at the University of Texas at Austin, has been producing a denominator of age-eligible citizens (age-eligible population minus age-eligible non-citizens, interpolated by state and nation from and between decennial Censuses). After some study of this matter, CSAE has come to believe that this denominator is the best for determining turnout, subject to the caveat below. It has come to this belief because of two factors:

1. Available data. One does not determine turnout simply for any given year but also as an historical comparison with previous years. Data for several of the issues involving the inadequacy of the age-eligible population (VAP) figures are either simply not available, not available in a timely manner, not available over a given period of history or not allocatable to the states. Data on convicted and incarcerated felons is only available for a fairly recent time period. State laws on whether convicted felons and ex-felons can vote are changing and have changed over time. There is no accurate set of figures on those deemed mentally incompetent. The number of American citizens residing abroad is ascertainable but the number of age-eligible has to be estimated and there are no figures which allow the allocation of these citizens by state. Naturalization figures come in too late, often a year or two after the election year, to be usable in any current population accounting. And while any given Census undercount can be allocated by state, one can only estimate how much of that undercount is of citizens as opposed to non-citizens.

2. The balance of the figures: In studying this statistical problem, CSAE has found that the most important issue is that of non-citizens. If one wants to have a relatively accurate picture of turnout, one must eliminate the non-citizens from the age-eligible population. On the other hand, the other adjustments to the denominator would not substantially differ from the denominator of citizen age-eligible population. In pursuing its inquiry into this topic, CSAE found that the factors which would lower the denominator – felons, ex-felons and people deemed mentally incompetent who can't vote – are roughly equal to two of the factors which would increase the denominator – citizens living in other countries and naturalization who could vote. If one added a ballpark figure for the number of citizens in the undercount who could vote, the

factors in those years of an undercount, other than non-citizens, which would increase the denominator exceeds those which would reduce it.

The one caveat in adopting the Burnham methodology lock, stock and barrel is that Burnham interpolates from Census to Census. These Censuses are accurate as of April 1 of each decennial year for all of the past 50 years. (In prior years, Census results captured the population as of varying months.) In order to have more accurate figures for November, CSAE has, using the same methodology, projected citizen population to November. In this report CSAE is using the April figure for its analysis of primary turnout and the November figures for its analysis of registration. It will use the November figure for analysis of general election turnout.

Methodology

Since the decennial census population figures are accurate as of April 1 in each census year, the VAP Burnham dataset calculates the difference in the required census figures between a base census year and the same figures as reported in the following census. To estimate the voting age population for the years between the censuses, the difference between them is simply multiplied by the number of months that have passed beyond April 1 of the base year and then added to the base year figure. For example, to arrive at the April 1, 1992 voting age population, the difference between the April 1, 1990 census population and the April 1, 2000 census population is multiplied by 24/120ths (for the 24 out of 120 months between the census counts) and added to the April 1, 1990 figure.

The process for arriving at the CSAE November Eligible figures is the same, except that the data is projected forward to November instead of April. To accomplish this, the multiplier is simply changed to the number of months that have passed since April of the base census year. For instance, to calculate the November 1996 voting age population, the difference between April 1, 1990 and April 1, 2000 is multiplied by 79/120ths and added to the April 1, 1990 count. The same interpolation process is applied to the decennial census counts of non-citizens of voting age in each state. Once estimates of the total voting age population and the non-citizen voting age population for each state have been calculated, the non-citizen figure is simply subtracted from the total to arrive at the appropriate figure.

Since the last decennial census occurred in 2000, it is necessary to project the figures forward to arrive at the voting age population for 2002 and 2004. To accomplish this, the difference between the 1990 and 2000 decennial censuses is used to establish a rate of growth. This rate of growth is then used to project forward based on the number of months passed since April 1990 out of the 120 months between the censuses. For instance, to obtain the voting age population for April 2004, the difference between April 1, 1990 and April 1, 2000 is multiplied by 168/120 and added to the April 1, 1990 total.

3. Registration: The registration figures for the individual states in the back of this report are final, official, certified by the chief election officer of each state and totally misleading.

In any given election the official registration figures provided by the states are inaccurate because they contain the names of people who have either died or moved but have not been removed from the registration rolls. The degree of inaccuracy in any given state would pend both on when they conducted a list cleaning and how thorough such a list cleaning was. A state which conducted a thorough list cleaning close to an election would likely have fewer names that were not eligible. But because of non-thorough and early list cleaning, some states, notably Alaska, Maine and Mississippi, often have registration rolls which exceed 100 percent of the Voting Age Population. Prior to the enactment of the NVRA, it was at least possible to make a national estimate of registration which would be, on the average, ten percent lower than the official figures provided by the states.

But the NVRA mandated that states must keep even those who have moved or died on their registration rolls for at least two federal elections, even if the people whose names have remained on the rolls have been determined to have moved or died. And, this, in turn, accounts for the substantially higher official figures than prior to the NVRA's implementation.

While states cannot remove names, they can transfer those for whom they have evidence have died or moved to an inactive list, which they are required by the NVRA to report each biennium by March of the year following a national election. A truer picture can be gleaned from the chart below which compares registration rates based on official figures and rates based on official figures minus those kept on inactive lists. Even then, the actual figure of registrants is likely to be less than the total minus inactive lists, since those lists represent only what states would have done had they purged those who should not be on the lists in the manner in which they had historically purged. The charts on total registration in the summary chart below represent the Committee's best estimate of what actual registration is likely to be, based on the states which have provided final and official registration figures at the time of this report. The percentages for partisan registration are taken from the official registration statistics and are useful not for their absolute numbers (which contain all the inflation factors listed above) but for their trend lines which are the best way of looking at partisan affiliation. (Three additional considerations when looking at these statistics: 1. Only 28 states and the District of Columbia have partisan registration and the partisan registration percentages estimated below are based on the raw registration figures. There are no similar corrective inactive lists for partisan registrants and it is likely that were there, the estimates for partisan registration percentages below would be smaller in each category. 2. The percentages of Democratic, Republican and Other registrations do not add up to 100 percent. The balance are unregistered. 3. The partisan percentages are taken from raw official data and thus do not yield the same totals as do the overall percentages).

The figures in this report are of those states which have reported final and official registration statistics at the time of publication, CSAE will be updating the figures every day through the election and those figures will be on CSAE's website.

State	2006 VAP	2006 Registration	2006 %VAP Registered	Inactive	net after subtracting inactive	adjusted percentage
Alabama	3,482,000	2,713,493	0.78	247,906	2,465,587	0.71
Arizona	3,936,000	3,061,540	0.78	493,139	2,568,401	0.65
Arkansas	2,103,000	1,657,682	0.79	197,600	1,637,922	0.78
Colorado	3,400,000	2,975,845	0.88	583,778	2,392,067	0.70
Florida	12,680,000	11,614,788	0.92	1,180,939	10,433,849	0.82
Georgia	6,337,000	5,132,902	0.81	725,784	4,407,118	0.70
Hawaii	892,000	662,728	0.74	78,038	584,690	0.66
Indiana	4,643,000	4,298,878	0.93	697,012	3,601,866	0.78
Iowa	2,211,000	2,077,239	0.94	145,327	1,931,912	0.87
Missouri	4,307,000	4,008,167	0.93	455,449	3,552,718	0.82
Nevada	1,621,000	1,229,229	0.76	238,414	990,815	0.61
Oregon	2,654,000	2,561,428	0.97	541,952	2,019,476	0.76
South Carolina	3,199,000	2,592,494	0.81	137,521	2,454,973	0.77
South Dakota	579,000	554,038	0.96	46,906	507,132	0.88
Utah	1,658,000	1,507,463	0.91	233,400	1,274,063	0.77
Vermont	478,000	433,168	0.91	22,387	410,781	0.86
Virginia	5,395,000	4,555,940	0.84	308,693	4,247,247	0.79
total	59,575,000	51,637,022	0.87	6,156,405	45,480,617	0.76

4. The Votes: The primary vote totals in this report are final and official. All are provided by the official statewide election office in each state. All figures for previous years are final, official, certified by the chief election officer in each state and checked against other historical records.

Analyzing primary turnout in a mid-term election is a complex process. In the back of this report, there will be several charts which offer different ways of looking at the primary results. Any chart which says total primary turnout is from states in which both major parties held statewide primaries (for governor and/or U.S. Senate). Because only some states held primaries in both parties, the vote totals for Democratic primaries and Republican primaries don't add up to the total vote. The charts of Democratic and Republican primaries include the states which had statewide primaries in each party. Three states – Kentucky, Louisiana and North Carolina – had neither a governor nor a U.S. Senator up for election or re-election.

Primary turnout is analyzed on the basis of the statewide vote. If there are two statewide contests in any state, the context which receives the highest number of votes is used for comparison. The charts in back analyze turnout in two ways – 1. turnout for all states which held primaries this year against all states which held primaries in previous years and 2. turnout for all states which held primaries in this year and in all previous years (a continuous record).

Two states – Arkansas and Utah – did not compile vote counts for their statewide races because

none were contested. Similar vote counts were not compiled for a number of uncontested races in other states. Connecticut, Massachusetts, New York and South Dakota did not provide vote counts for their uncontested Republican gubernatorial primaries. Delaware, Indiana and Massachusetts did not report vote counts for Democratic U.S. Senate nominees. Connecticut, Mississippi and Virginia had no vote counts for their unchallenged Republican U.S. Senate nominees.

5. Acknowledgments: Primary research for this report was done by Curtis Gans and Matt Mulling, who served as research assistant for this report. Mark Harvey, CSAE research assistant emeritus helped compile the data for previous years and has been largely responsible for the development of CSAE's November denominators. Samuel Schreiber, CSAE research associate emeritus once removed also was responsible for some of the data in this report and created a custom database program for the analysis of the collected data. CSAE would also like to express its profound gratitude to Dr. Walter Dean Burnham, professor emeritus at the University of Texas at Austin, for sharing his database, helping to devise CSAE's new November denominator for the analysis of registration and turnout and for his continuing help to CSAE's work. The Committee is also grateful to all the state election officials for graciously yielding their registration and voting figures after an unconscionable amount of hounding by CSAE's staff, **except for election officials in the District of Columbia who charge for data which should be a matter of public record.**

6. Culpability: The analysis contained in this report has been done by Curtis Gans, CSAE's director, who is solely responsible for any and all errors contained within.

SUMMARY CHARTS

1. Overall Registration: Estimated national registration percentage of eligible citizens for 2006 and previous mid-term elections (back to 1962), adjusted for inactive lists (last two mid-terms) and inflation of rolls by those who have either died or moved but have not been removed from the rolls based on the 34 states which have reported official registration figures as of this publication:

YEAR	PCT. REGISTERED	EST. REGISTRATION
2006	68	139,810,000
2002	68	134,570,000
1998	66	125,800,000
1994	65	119,210,000
1990	63	110,970,000
1986	65	109,790,000
1982	63	101,870,000
1978	63	96,580,000
1974	63.5	90,610,000
1970	67	81,740,000
1966	66	76,100,000
1962	64.5	70,310,000

2. Partisan Registration Trends: Partisan registration percentages from 1962 to 2006, based on the 13 states (of 28 and the District of Columbia which mandate partisan registration) which have reported registration figures as of this publication and for which there are comparable figures in previous years.. Note this is based on official registration figures which are, as noted not accurate, but whose trend lines are likely to be:

YEAR	REPUBLICAN	DEMOCRATIC	OTHER
2006	31.0	36.8	16.7
2002	30.2	37.2	14.4
1998	29.8	38.4	12.0
1994	26.0	36.0	7.5
1990	25.2	37.2	6.5
1986	24.1	39.8	6.5
1982	20.8	38.7	5.6
1978	19.9	41.2	5.0
1974	21.5	41.5	5.6
1970	24.0	43.3	3.2
1966	23.5	46.7	3.0
1962	25.4	48.3	1.4

3. Republican Regional Registration Trend: Republican regional registration trend 1962-2002 (not sufficient data for 2006) based on official and unadjusted registration data – percent of citizen eligibles registering Republican in the 28 states and the District of Columbia which have partisan registration):

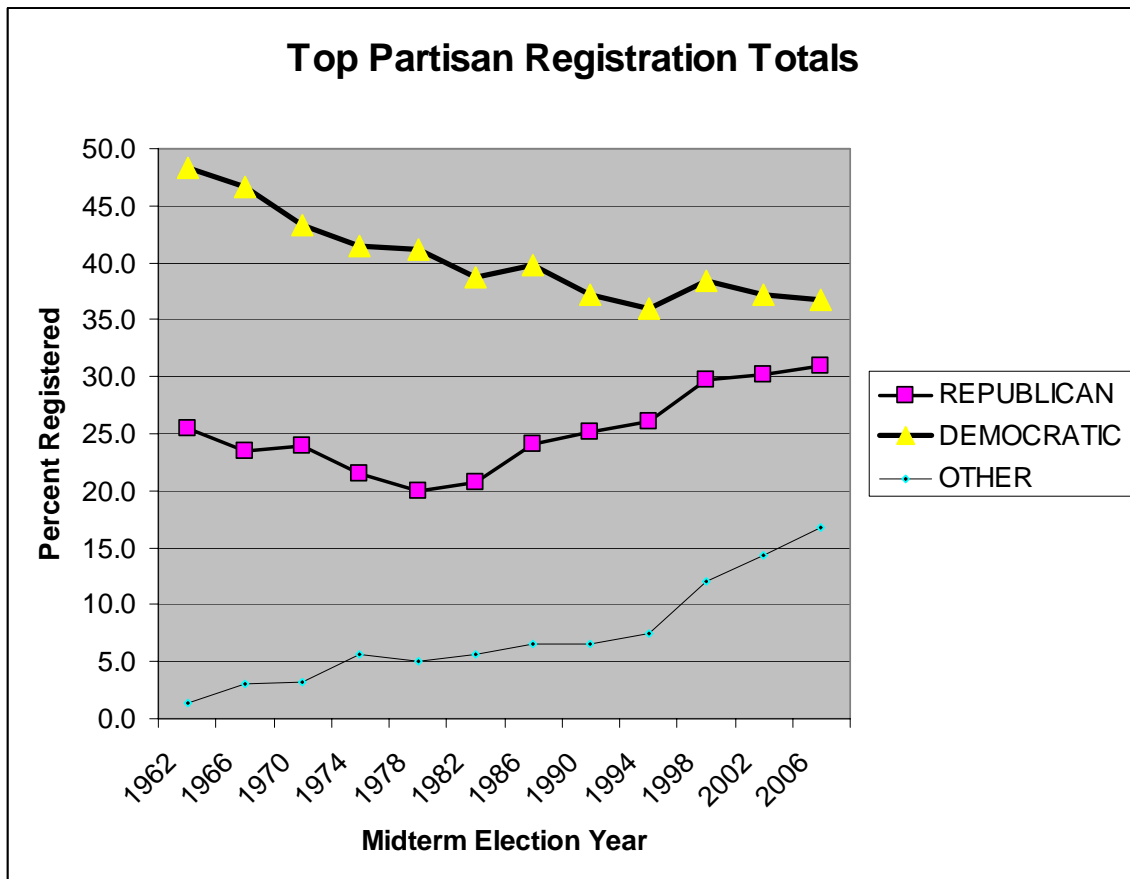

YEAR	SOUTH	NON-SOUTH
2002	28.4	28.6
1998	27.5	28.6
1994	23.3	27.6
1990	21.9	27.2
1986	20.1	26.8
1982	16.6	24.1
1978	14.6	22.3
1974	15.2	25.5
1970	14.4	29.6
1966	12.0	30.5
1962	12.1	30.9

4. Final Statewide Primary Vote Percentage Trend: The total vote percentages are only for those states (39) which had primaries in both parties. The partisan percentages are for the states which held primaries for each party (41 GOP, 44 Democratic), numbers which exceed the states which held two-party statewide primaries. All percentages are votes of eligible citizens and are averages for each year:

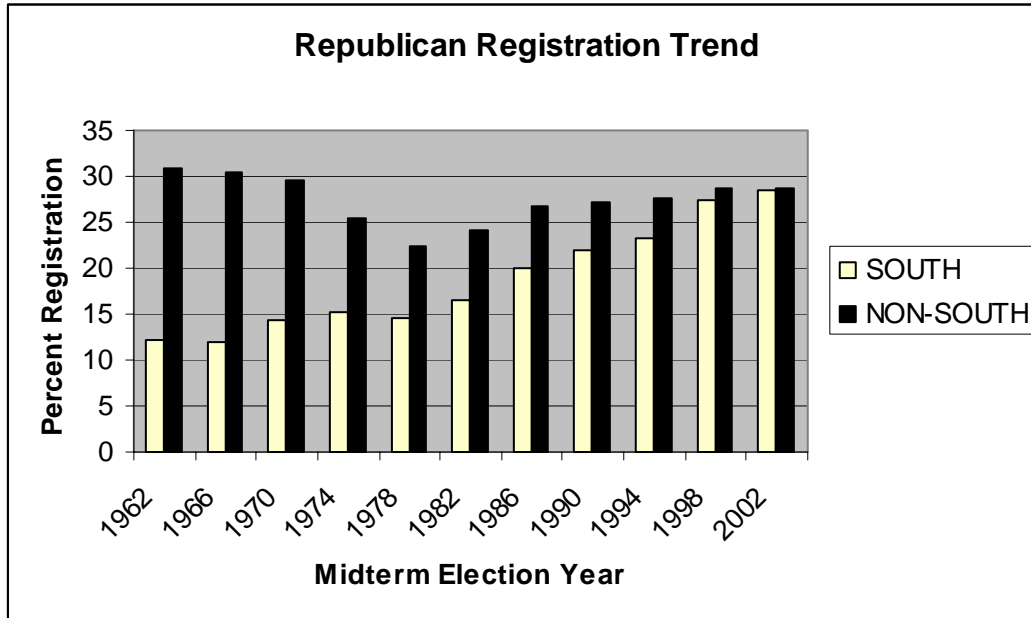

YEAR	TOTAL	REPUBLICAN	DEMOCRATIC
2006	15.8	7.1	8.6
2002	18.6	8.4	9.8
1998	18.5	8.7	9.7
1994	19.0	8.6	10.3
1990	20.8	8.2	12.5
1986	20.7	7.7	11.8
1982	23.3	7.8	15.1
1978	24.2	8.2	15.1
1974	24.7	7.6	15.8
1970	28.6	10.4	16.8
1966	33.3	12.9	19.6
1962	30.5	12.7	19.7

II. GRAPHS

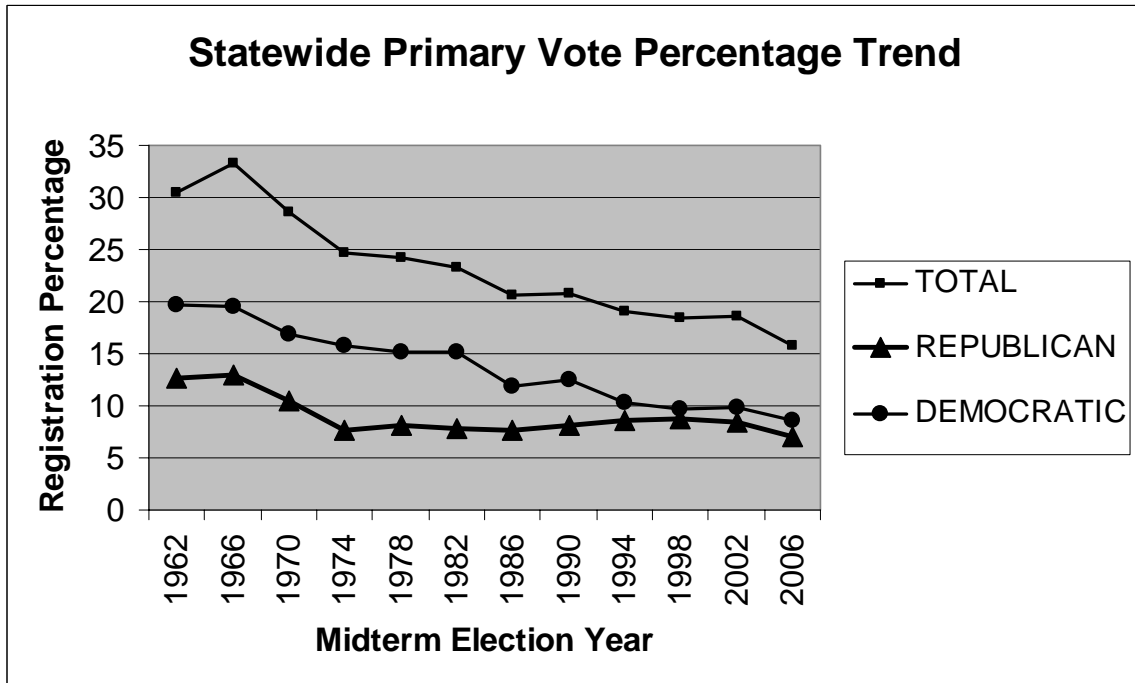

2, Partisan Registration Trends: Partisan registration percentages from 1962 to 2006, based on the 13 states (of 28 and the District of Columbia which mandate partisan registration) which have reported registration figures as of this publication and for which there are comparable figures in previous years.. Note this is based on official registration figures which are, as noted not accurate, but whose trend lines are likely to be:

3. Republican Regional Registration Trend: Republican regional registration trend 1962-2002 (not sufficient data for 2006) based on official and unadjusted registration data – percent of citizen eligibles registering Republican in the 28 states and the District of Columbia which have partisan registration):

4. Final Statewide Primary Vote Percentage Trend: The total vote percentages are only for those states (39) which had primaries in both parties. The partisan percentages are for the states which held primaries for each party (41 GOP, 44 Democratic), numbers which exceed the states which held two-party statewide primaries. All percentages are votes of eligible citizens and are averages for each year:
